## 1 General

## $1.1 \quad$ Introduction

This manual incorporates the Installation, Maintenance and Operation (IMO) instructions for the Axiom AN series valve controllers. The Axiom AN is designed to provide position feedback indication and pneumatic control of on/off automated valves.

## Note

The selection and use of the Axiom AN in a specific application requires close consideration of detailed aspects. Due to the nature of the product, this manual cannot cover all the likely situations that may occur when installing, using, or servicing the Axiom AN. If you are uncertain about the use of this device, or its suitability for your intended use, please contact StoneL for assistance.

### 1.2 Title plate markings

The limit switch has an identification plate attached to the cover.

1. Identification plate markings:
2. Model
3. Serial number
4. Date
5. Electrical rating(s)
6. Protection class information*
7. Note
8. Warning
9. Approval markings*
10. Logo

Note

* See page 27for specific product markings.

### 1.3 CE markings

The limit switch meets the requirements of European Directives and has been marked according to the directive.

### 1.4 Recycling and disposal

Most limit switch parts can be recycled if sorted according to material. In addition, separate recycling and disposal instructions are available from us. A limit switch can also be returned to us for recycling and disposal for a fee.

### 1.5 Safety precautions

Do not exceed the permitted values! Exceeding the permitted values marked on the limit switch may cause damage to the switch and to equipment attached to the switch and could lead to uncontrolled pressure release in the worst case. Damage to the equipment and personal injury may result.

To prevent ignition of hazardous atmospheres, replace cover before energizing the electrical circuits. Keep cover tightly closed when in operation.

### 1.6 Assembly drawing

1. Title plate
2. Cover
3. Body screws
4. Internal ground lug
5. External ground lug
6. Body
7. Visual indicator cover
8. Trigger
9. Visual indicator drum retaining screw
10. Visual indicator drum
11. Visual indicator drum coupler
12. Visual indicator drive block
13. DA/SR plug
14. Air manifold plate mounting screws
15. Air manifold plate orifice o-rings
16. Air manifold plate
17. Actuator shaft

### 1.7 Specifications for all models

See page 10 for function specific details.

| Specifications |  |
| :---: | :---: |
| Materials of construction |  |
| Housing \& air manifold plate | Epoxy-coated anodized aluminum |
| Visual indicator drum | Nylon |
| Visual indicator cover | Polycarbonate |
| Fasteners | Stainless steel |
| O-rings | Nitrile compound |
| Operating life | 1 million cycles ( 0.8 Cv ) <br> 500,000 cycles ( 1.2 Cv ) |
| Temperature range | $-40^{\circ} \mathrm{C}$ to $80^{\circ} \mathrm{C}\left(-40^{\circ} \mathrm{F}\right.$ to $\left.176^{\circ} \mathrm{F}\right)$ |
| Enclosure protection | Type 4, 4X, and 6 and IP66 / IP67 |
| Warranty |  |
| Sensing \& communication module | Five years |
| Mechanical components | Five years |
| Unit weights |  |
| Aluminum | $2.38 \mathrm{~kg} / 5.25 \mathrm{lb}$ |
| Unit dimensions |  |
| Unit height Cover removal clearance | 122.00 mm [ 4.80 in ] 214.00 mm [5.80 in] |
| Position sensing |  |
| Accuracy | Within $1^{\circ}$ |
| Repeatability | Within $1^{\circ}$ |
| Setting buffer | $4^{\circ}$ from set point (Rotational distance from original set point where switch will energize on return stroke) |
| Dead band | $6^{\circ}$ from set point (Rotational distance from original set point where switch will de-energize) |
| Max rotational range | $120^{\circ}$ |
| Terminal block specifications |  |
| Recommended torque | $4.42 \mathrm{in.lbs}$ ( 0.5 Nm ) |
| Conductor strip length | $0.22-0.25$ in ( $5.5-6.5 \mathrm{~mm}$ ) |
| Maximum wire size | 30-12 AWG (0.5-2.5 mm²) |
| Wire type | Stranded or solid |
| Environmental conditions |  |
| Location | Indoor and outdoor |
| Maximum altitude | 5000 m |
| Maximum humidity | 90\% |
| Pollution degree | 4 |
| Ratings and approvals* | See page 27 or www.stonel.com/approvals/ |
| * Only models listed on Stonel's official website are approved per specific rating. |  |

### 1.8 Pneumatic valve specifications

## Specifications

## General pneumatic specifications

### 1.9 Pneumatic valve schematics

Fig. 1 Single pilot spring return pneumatic valve on spring return actuator with rebreather open

Fig. 2 Single pilot spring return pneumatic valve on doubleacting actuator with rebreather closed

Fig. 3 Axiom dual coil shuttle piston pneumatic valve

### 1.10 Dimensions

Note
Axiom AN certified dimensional drawing can be found at www.stonel.com/

## 2 Assembly and mounting

### 2.1 Instructions

## Special notes:

- Mounting of the Axiom requires a StoneL mounting kit specific to the actuator the Axiom is to be mounted to.
- It is recommended that thread lubricant or anti-seize be used on the Axiom body screws (Item C) prior to assembly.
- In high cycle or high vibration applications, blue Loctite ${ }^{\circledR}$ may be used on the air manifold mounting screws (Item I) and the visual indicator drum retaining screw (Item E).
- It is highly recommended that exhaust ports E2 and E3 be fitted with low restriction mufflers or breather vent caps to prevent ingestion of water and debris into the pneumatic valve.

## Steps

Refer to Axiom AN assembly figure on page 8 when performing mounting and assembly procedures. Axiom unit and mounting kit are supplied separately. From Axiom shipping container, ensure items A, D, F and G are present. From the mounting kit, ensure items E, H, I, J, K, and $K$ are present.

1. Determine if the actuator the Axiom is to be mounted on is double-acting (DA) or spring return (SR). Ensure the DA/SR plug (Item J ) is in the corresponding port in the air manifold plate. (See detailed view of $L$ below). If the DA/SR plug is in the incorrect position, gently remove $p$ with a pair of pliers and insert into the proper orifice.
2. Locate the air manifold plate (Item $L$ ) and place on the actuator. Using an M4 allen wrench, fasten with the four air manifold mounting screws (Item I). Torque screws to 25 to 30 in.lbs (2.8 to 3.4 Nm ).
3. Place visual indicator drive block (Item H) into slot in the actuator shaft. Place visual indicator drum coupler (Item G) onto the visual indicator drive block. Next, place the visual indicator drum (Item F) onto the visual indicator drum coupler. Align the holes in all three items with the threaded hole in the actuator shaft and fasten down with the visual indicator drum retaining screw (Item E). Leave screw loose in order to facilitate indexing of the visual indicator.
4. With the actuator in the closed position, center the visual indicator drum until the CLOSED quadrants are centered between the visual indicator cutouts on the air manifold plate. (See detailed view of K below). With an M4 allen wrench, tighten down with the visual indicator drum retaining screw. Torque screws to 15 to 20 in.lbs (1.7 to 2.3 Nm ).
5. Place the trigger (Item D) into the visual indicator drum, aligning the locking tabs to the corresponding notches in the visual indicator drum. Press down on trigger until the locking tabs snap into place.
6. Verify air manifold plate orifice o-rings (Item J) are in place.
7. Set the Axiom body (Item A) in place. With an M5 allen wrench, torque the Axiom body screws (Item C) to 8 to 10 ft . Ibs (10.8 to 13.5 Nm ).
8. After all wiring and sensor setting procedures have been completed, install Axiom cover and tighten.

## 3 Maintenance, repair and installation

### 3.1 Maintenance and repair

No routine maintenance of Axiom units is required when installed in environments for which they are designed. If installed in severe environments, pneumatic components may require replacement at more frequent intervals for maximum performance. Repair of Axiom units must be done by StoneL or by qualified personnel that are knowledgeable about the installation of electromechanical equipment in hazardous areas. All parts needed for repair must be purchased through a StoneL authorized distributer to maintain warranty and to ensure the safety and compliance of the equipment.

### 3.2 Installation

Field wiring

- It is the responsibility of the installer, or end user, to install this product in accordance with the National Electrical Code (NFPA 70) or any other national or regional code defining proper practices.
- This product comes shipped with conduit covers in an effort to protect the internal components from debris during shipment and handling. It is the responsibility of the receiving and/or installing personnel to provide appropriate permanent sealing devices to prevent the intrusion of debris or moisture when stored or installed outdoors.
- Use field wiring rated at least $10 \mathrm{~K}\left(+10^{\circ} \mathrm{C}\right)$ above ambient temperature.

## 4 Function specific details

### 4.1 Sensor/switching modules

### 4.1.1 SST N.O. sensor (35S \& 35W)

| Specifications |  |
| :--- | :--- |
| Configuration | (2) N.O. 2-wire solid state sensors |
| Voltage range | $20-250 \mathrm{VAC} 50 / 60 \mathrm{~Hz} ; 20-125 \mathrm{VDC}$ <br> $20-60 \mathrm{VAC} 50 / 60 \mathrm{~Hz} ; 20-55 \mathrm{VDC}$ (with connector <br> option 18) |
| Minimum on current | 2.0 mA |
| Maximum continuous current | 0.1 amps |
| Maximum leakage current | 0.50 mA (AN35S); 0.60 mA (AN35W) |
| Maximum voltage drop | 6.5 volts @ 10 mA <br> 7.2 volts @ 100 mA |
| Circuit protection | Protected against short circuits and direct <br> application of voltage with no load. |

## Wiring diagrams

### 4.1.1 SST N.O. sensor (35S \& 35W) continued

## Bench test procedure and sensor setting instructions

Power must be applied to both sensors to ensure proper circuit operation. Use a 24 VDC power supply with series load resistor, ( 2 K $6 \mathrm{~K} \Omega$ ), connected to the $24 \mathrm{VDC}+$.

1. Connect $24 \mathrm{VDC}+$ to the CLOSED C (common) and OPEN C (common) terminals. Connect 24 VDC- to the CLOSED NO and OPEN NO terminals.
2. Operate actuator to the closed position.
3. Press and hold SET CLOSED button until Closed LED is lit (2 seconds). Release button.
4. Operate actuator to the open position.
5. Press and hold SET OPEN button until Open LED is lit (2 seconds). Release button.
6. Setpoints are retained even after power is removed.

To electrically test solenoid, apply power to the SOL PWR IN terminals only.
Note
If using only one of the sensors for valve position feedback, the Closed sensor (red) must be used.

Caution: A series load resistor must be used when bench testing in order to ensure proper module operation.

## Wink feature

The Wink feature provides the capability of setting the closed or open LEDs to simultaneously flash or wink at a 2 Hz rate. This feature aids in physically locating the unit on the network. Does not change valve state indication in the control system.

| Specifications for Wireless Link |  |
| :---: | :---: |
| Communication | Bluetooth ${ }^{\ominus}$ technology; single mode (not compatible with Bluetooth ${ }^{\bullet}$ Classic) |
| Frequency band | 2.402-2.480 Ghz |
| Transmit power | 4 dBm or $\sim 2.5$ milliwatts |
| Data rate | 1 Mbit/second; effective information transmit rate ~10 Kbits/second |
| Range | Up to 100 meters ( 330 feet) in free space. Range is reduced by obstructions between handheld device and Wireless Link VCT. Line of site is not necessary. |
| Registrations | FCC, IC, CE |
| CE compliance | Exceeds industrial compliance standards |
| VCT identification | VCTs in range will be displayed in order of signal strength |
| VCT link | One device accessed at a time between client (handheld device) and server (VCT). Each server accessed by one client at a time |
| Application | StoneL Wireless Link available from the App store |
| Hand-helds | Compatible with iPhone ${ }^{\bullet}$ and $\mathrm{iPad}{ }^{\text {® }}$ with iOS 9 or later |

### 4.1 Sensor/switching modules

### 4.1.2 NAMUR sensor (45S) single coil

| 4 | CAN H |
| 5 | CAN L |

## Wiring diagrams

### 4.2.1 VCT with DeviceNet ${ }^{\text {TM }}$ communication (92S \& 92W) continued

## 「 - - - - WARNING <br> Do not apply external power to the output terminals. This will cause permanent damage to the unit.

1
Attention: Any external auxiliary device connected to the VCT module shall be ground isolated.

## Bench test procedure and sensor setting instructions

To test sensors, use a 24 VDC power supply. No series load resistor is required.

1. Apply power across the $\mathrm{V}+$ and V - terminal points.
2. Operate actuator to the closed position.
3. Press and hold SET CLOSED button until red LED is lit (2 seconds). Release button.
4. Operate actuator to the open position.
5. Press and hold SET OPEN button until green LED is lit (2 seconds). Release button.
6. Setpoints are retained even after power is removed.

A functioning DeviceNet ${ }^{T M}$ network is required to test communications and solenoids.

| Module/Network Status LED status |  |
| :---: | :---: |
| DeviceNet'm status LED | Fault description |
| LED off | Device not powered, or is alone on the bus |
| Solid green | Device is online and allocated to a master |
| Flashing green | Device is online, but not allocated to a master |
| Flashing red (Minor Fault) | Output shorted |
| Flashing red (Minor Fault) | No magnet detected |
| Flashing red (Minor Fault) | Communication to protocol controller has failed |
| Flashing red (Minor Fault) | Connection to DeviceNet ${ }^{\text {mm }}$ master has timed-out |
| Flashing red (Minor Fault) | Address/baud switches are not equal to currently online values |
| Solid red (Major Faut) | Internal sensor fault - sensor may need replacing |
| Solid red (Major Fault) | Device has detected another device on the bus with the same DeviceNet ${ }^{\text {tm }}$ address |
| Solid red (Major Fault) | Device has detected a CAN network Bus-off fault |

Caution: Power cycling unit with Byte 0, Bit 3 or Bit 4 set will cause the sensor(s) to set at that valve position. Ensure Byte 0, Bit 3 and Bit 4 are reset to 0 after performing a remote sensor setting.

## Remote sensor setting feature

The Remote Sensor Setting feature provides the capability of setting the closed and open sensors remotely from the control system.

1. DeviceNet ${ }^{\text {TM }}$ communications are required in order to remotely set the sensors. The unit must be addressed and correctly configured to be recognized by the control system.
2. With the valve/actuator in the closed position, set byte 0 , bit 3 to " 1 "for at least two seconds. This will set the closed sensor to that valve/actuator position. Set byte 0, bit 3 back to "0"
3. With the valve/actuator in the open position, set Byte 0 , Bit 4 to "1" for at least two seconds. This will set the open sensor to that valve/ actuator position. Set byte 0, bit 4 back to "0"

## Wink feature

The Wink feature provides the capability of setting the closed or open LEDs to simultaneously flash or wink at a 2 Hz rate. This feature aids in physically locating the unit on the network.

1. DeviceNet ${ }^{\text {TM }}$ communications are required in order to set the Wink feature. The unit must be addressed and correctly configured to be recognized by the control system.
2. Set byte 0 , bit 2 to " 1 " in the desired unit. Once the correct unit has been physically located on the network, indicated by the winking of the LEDs, set byte 0 bit 2 back to " 0 ". Performing this function will not change the closed and open sensor setpoints.

## Fault Bit (input byte 0, bit 7)

The Fault Bit will set to a 1 when input byte 0 , bits 0 and 1 are set to 1 or 0 at the same time.
When input byte 0 , bits 0 and 1 are both set to 1 , this would indicate that the valve is both open and closed at the same time. This would be an abnormal or Fault condition.

| :---: | :---: |
| Communication | Bluetooth ${ }^{\ominus}$ technology; single mode (not compatible with Bluetooth ${ }^{\circ}$ Classic) |
| Frequency band | 2.402-2.480 Ghz |
| Transmit power | 4 dBm or $\sim 2.5$ milliwatts |
| Data rate | 1 Mbit/second; effective information transmit rate <br> ~10 Kbits/second |
| Range | Up to 100 meters ( 330 feet) in free space. Range is reduced by obstructions between handheld device and Wireless Link VCT. Line of site is not necessary. |
| Registrations | FCC, IC, CE |
| CE compliance | Exceeds industrial compliance standards |
| VCT identification | VCTs in range will be displayed in order of signal strength |
| VCT link | One device accessed at a time between client (handheld device) and server (VCT). Each server accessed by one client at a time |
| Application | StoneL Wireless Link available from the App store |
| Hand-helds | Compatible with iPhone ${ }^{\text {a }}$ and $\mathrm{Pad}{ }^{\text {® }}$ with IOS 9 or later |

## 5 Wireless Link user guide

### 5.1 Getting started

Before using this guide, ensure that you have downloaded the most current version of the StoneL Wireless Link app to your iPhone ${ }^{\oplus}$ or iPad ${ }^{\circledR}$ from the App Store. It is an iPhone ${ }^{\oplus}$ app but designed to work with an iPad ${ }^{\circledR}$ as well. When searching the App Store on an iPad ${ }^{\circledR}$, ensure that the drop-down menu at the top of search results page is set to "iPhone Only." Your iOS device must be running IOS 9 or later and be equipped with Bluetooth ${ }^{\ominus}$ technology to use the StoneL Wireless Link app. The app is not compatible with Bluetooth ${ }^{\ominus}$ Classic.
Make sure that your iOS device has its Bluetooth ${ }^{\circledR}$ capability turned on when attempting to use the StoneL Wireless Link app. This can be found under your iOS device's settings. To ensure that you have good Bluetooth ${ }^{\ominus}$ reception, keep your iOS device within $33 \mathrm{ft}[10 \mathrm{~m}]$ of the module that you wish to connect to. The range of your Bluetooth ${ }^{\circledR}$ device may be affected by many things, including interference from other devices and physical obstructions.

| Upon disconnect or master disabling overrides, output forces will be removed and valve may cycle.

### 5.2 Home screen

## Selecting a valve

After opening the StoneL Wireless Link app, you are directed to the home screen. This screen allows you to browse and select a specific automated valve when multiple valves are present.

1. All energized wireless modules within range of your iOS device will appear on the screen (Image 1). If no powered devices are within range, the device list will be blank.
2. To identify a specific valve when multiple valves are present, select the wink button next to the unit you wish to select (Item A). This will cause the module's LEDs to blink for 30 seconds, or until you press the "Stop Winking" button (Item B)
3. Choose a specific valve by selecting the row that relates to the unit you wish to select (Item C), this will direct you to the device detail screen.

## Note

The list of devices present can be refreshed by swiping downward on the home screen.

## Releasing a device

Once you have selected a device, it will be paired to your Apple device until you unpair it.

1. In order for another Apple device user to access control with their wireless link app, unpair your device by going back to the home screen/device list.

## Menu

Selecting the menu (Item D) on the upper left corner of the home screen allows you access import and export features (Image 2).

1. The device list import allows you to import: valve tag number, device address, baud rate (if applicable), valve/actuator description and additional information from a CSV file.
2. The device list export allows you to export: valve tag number, device address, baud rate (if applicable), valve/actuator description, valve position, stroke time, cycle count data, and additional information to a CSV file.

### 5.3 Locked screen

If the icons on the device detail screen appear grayed-out or unavailable to select, this means the master is still in control. (Image 3) Check to ensure that the power supply is set to IR addressing mode (AS-i only) or enable the control override bit for the device (AS-i DO Bit 2; DeviceNet ${ }^{\text {™ }}$ Byte 0, Bit 7).

Image 1

Image 2

Image 3

### 5.4 Device detail screen

You can customize the tag for a device, change the address, change the baud rate (if applicable), force the solenoids on or off, cause the device to wink, and set the open/closed limits from the device detail screen (Image 4a or 4b).

Changing the device tag or address on a DeviceNet unit

1. To change the tag, edit the existing tag in the associated text field (Item E). The tag can be up to sixteen characters long.
2. To change the DeviceNet address, edit the existing address in the associated text field (Item G). The DeviceNet address for the 92W can be 1 to 63
a. When changing the address, a warning screen will appear indicating this action could disrupt the process. Select cancel or continue.
b. Select continue and alter the address via number pad and select done. A warning screen will appear indicating the choice to reset now or reset later. Resetting the device could disrupt the process.
c. Selecting reset now will implement the address change of the device.
d. Selecting reset later will not implement device address change until selecting reset slave (Item F) and will cause the device address to indicate pending status.
3. To change the device baud rate (Item H), select the desired rate from the choices. The device default baud rate is 125 K .
a. When changing the baud rate, a warning screen will appear indicating this action could disrupt the process. Select reset now or reset later.
b. Selecting reset now will implement the change to the baud rate of the device.
c. Selecting reset later will not implement the change to the baud rate of the device until selecting reset slave.
4. Selecting reset slave will cause a warning screen to appear indicating resetting the device could disrupt the process. Select continue to implement changes made to the device address and/ or device baud rate.

## Changing the device tag or address on an ASi unit

1. To change the tag, edit the existing tag in the associated text field (Item M). The tag can be up to sixteen characters long.
2. To change the AS-i address, edit the existing address in the associated text field (Item N). The AS-i address for the 97W can be 0 A to 31 A or 0 B to 31 B .
a. When changing the address, a warning screen will appear indicating this action could disrupt the process. Select cancel or continue.
b. Select continue and alter the address via number pad and select done.

## Forcing the solenoids on/off

Forcing a solenoid on or off will override master control if wireless link overrides are enabled.

1. The solenoid control state is forced on or forced off when it is highlighted in orange (Item J).
a. Warning screen will appear indicating this action could disrupt the process. Select cancel or continue.
b. Select continue and when a solenoid is on, a yellow light will illuminate next to the solenoid (Item K).
c. Select continue and when a solenoid is off, no light will illuminate next to the solenoid (Item L).

Image 4a-DeviceNet detail

## Image 4b-ASi detail

## Setting the valve position

Forcing the solenoid on and off is one way of actuating the valve when setting the open and closed positions.

1. To set a valve to the closed position:
a. Actuate the valve to the CLOSED position. This can be done by forcing the solenoid(s) on or off.
b. Select set closed. A warning screen will appear indicating this action could disrupt the process. Select cancel or continue.
c. Select continue and the red closed light will illuminate (Item I).
d. The valve now remembers the current position as the closed position.
2. To set a valve to the open position:
a. Actuate the valve to the OPEN position. This can be done by forcing the solenoid(s) on or off.
b. Select set open. A warning screen will appear indicating this action could disrupt the process. Select cancel or continue.
c. Select continue and the green open light will illuminate (Item I).
d. The valve now remembers the current position as the open position.

### 5.5 More information screen

To see additional information about a specific valve, swipe right or use the arrows at the top of the device detail screen.

1. At the top of the more Information screen (Image 5), the unit model number, serial number, and date code are displayed (Item O). These are preset from the factory and cannot be changed.
2. There are two customizable text boxes titled "Valve/Actuator Description" and "Additional Information" where up to 160 characters can be added for user notes, such as maintenance or service records (Item P).

## Website and instruction manual

The direct links to StoneL's website and the unit Installation, Maintenance and Operating Instructions located on the bottom buttons of the More Information screen require an internet connection to access (Item Q).

### 5.6 Diagnostics screen

To see additional diagnostics about a specific valve, advance a page to the right using the arrows at the top of the more information screen.

1. The valve position information includes real time valve position, stroke time baseline, and stroke time of last cycle (Item R).
2. The valve cycle count is displayed and indicates how many cycles the valve has made since last reset (Item S). A cycle is considered to be a complete actuation of the valve. Selecting the reset button (Item $U$ ) will erase the cycle count and start counting again from 0 .
3. The current temperature of the valve monitor is displayed; along with the temperature range of the valve since last reset (Item T ). Selecting the reset button (Item V ) will erase the historical temperature data and start a new period of temperature data collection.
4. If an external 4-20mA loop powered device is connected to the auxiliary analog input of the module, the feedback signal can be monitored here. (DeviceNet only - Item W)
5. If external switches are connected to the Aux 1 or Aux 2 inputs of the module, these switches can be monitored here. (AS-i only Item Y)
6. The Error Status register (Item $X$ ) can display numerous faults that are detected by the module. This data is only available via the Wireless Link app and is not accessible from the bus network. The following is a list of errors/faults that can be detected and display on the iOS device:

| Error status register |  |  |
| :--- | :--- | :--- |
| Common | DeviceNet only | ASi only |
| Output shorted | Major DeviceNet fault | No data exchange |
| Internal sensor fault | Minor DeviceNet fault |  |
| No magnet detected | DeviceNet timed-out |  |
| Bus protocol error | Pending DeviceNet change |  |
|  | Duplicate address |  |
|  | Bus-off fault |  |

### 5.7 Federal Communication Commission (FCC) and Industrial Canada (IC) statements

### 5.7.1 Federal Communication Commission (FCC)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

## Note

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

AN/ANX 35W: Contains FCC ID: SQGBL651
AN/ANX 92W, AN/ANX 96W, AN/ANX 97W: Contains FCC ID PI4BL600

## FCC Radiation Exposure Statement

The product complies with the US portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

### 5.7.2 Industrial Canada (IC)

This device complies with Industry Canada's license-exempt RSSs. Operation is subject to the following two conditions:

1. This device may not cause interference; and
2. This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

1. I'appareil ne doit pas produire de brouillage;
2. I'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

AN/ANX 35W: Contains IC: 3147A-BL651
AN/ANX 92W, AN/ANX 96W, AN/ANX 97W: Contains IC: 1931B-BL600

## Radiation Exposure Statement

The product complies with the Canada portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

## Déclaration d'exposition aux radiations

Le produit est conforme aux limites d'exposition pour les appareils portables RF pour les Etats-Unis et le Canada établies pour un environnement non contrôlé. Le produit est sûr pour un fonctionnement tel que décrit dans ce manuel. La réduction aux expositions RF peut être augmentée si l'appareil peut être conserve aussi loin que possible du corps de l'utilisateur ou que le dispositif est réglé sur la puissance de sortie la plus faible si une telle fonction est disponible.
