MOA-3800 VARIABLE ATTENUATOR

AVAILABLE EXCLUSIVELY FROM EXFO

Optimized for use with EXFO systems and software control via SCPI over ethernet, the MOA-3800 Variable Attenuator (VOA) can precisely add attenuation to four, eight or sixteen different singlemode or multimode fibers, with the attenuation of each fiber set independantly. An optional *self-adjusting* mode is also available, which automatically monitors and sets the output power to a desired power level.

KEY FEATURES

- Singlemode or multimode fiber
- 4, 8 or 16 channels
- VOAs only, or with a self-adjusting power option
- Linear response
- Protocol and bit rate independent
- SCPI over ethernet remote control

APPLICATIONS

- Bit error rate (BER) testing
- System characterization
- Component or system loss simulation
- Optical margin and loss budget analysis
- WDM power balancing

1. All specifications are without connectors, at 23 ± 5 °C.

2. Default power off state does not add any attenuation (transparent).

3. Specification valid for Self-Adjusting closed-loop mode only.

4. Excess Loss is the insertion loss when set to 0 dB of attenuation.

5. Wavelength dependent loss (WDL) is defined as the maximum deviation

in insertion loss at a given attenuation setting, measured 1528 - 1563 nm.

6. Add 0.1 dB for operation over 1290 - 1330 nm, or 1570 - 1610 nm. 7. Add 0.2 dB for operation over 1290 - 1330 nm, or 1570 - 1610 nm.

8. Add 0.3 dB for operation over 1290 - 1330 nm, or 1570 - 1610 nm.

9. Polarization Dependent Loss (PDL) is measured at 1550 nm. Add 0.1 dB

for operation at 1310 or 1590 nm.

10. Repeatability is defined within 100 cycles.
