

## Description:

The HYDAC Flow Switch in the series HFS 2100 is based on the variable area float principle. The test medium moves a spring-loaded float in the direction of flow, depending on the flow rate. A reed contact is fitted to the outside of the instrument and is therefore separate from the flow circuit. When the magnet inside the float reaches the pre-set position, the reed contact will switch. To protect it from external influences, the switch is encapsulated in a casing designed to allow steplessly variable adjustment.
The instruments are designed to be capable of monitoring threshold values reliably, even when the viscosity
fluctuates. The viscosity may fluctuate between 30 and 600 cSt .
The main areas of application are:

- Central lubrication systems
- Circulation oil lubrication systems
- Transformers
- Cooling systems and circuits
- Lubrication circuits
- Hydraulic systems
- Pumps
- Welding machines and laser systems
- Chemical industry
- Research \& development

## Fluid type:

- Oils / viscous fluids

Special features:

- Accuracy $\leq \pm 10$ \% FS
- Viscosity compensation from 30 .. 600 cSt
- Optional mounting position
- High level of function reliability
- High level of switching accuracy
- Stepless switch point setting by user
- High pressure resistance
- Threaded connection
- ATEX version also available for use in potentially explosive atmospheres

On units with a different modification number, please read the label or the technical amendment details supplied with the instrument.

## Accessories:

Appropriate accessories, such as electrical connectors, can be found in the Accessories section

Pin connections:

| Pin | HFS $21 \times 5-\times \mathrm{S}$ | HFS $21 \times 5-\mathrm{xW}$ |
| :--- | :--- | :--- |
| 1 | Centre | Centre |
| 2 | N/O contact | N/C contact |
| 3 | n.c. | N/O contact |
| $\perp$ | PE | PE |

## M12x1

| Pin | HFS 21x6-xS | HFS 21x6-xW |
| :--- | :--- | :--- |
| 1 | Centre | Centre |
| 2 | n.c. | N/C contact |
| 3 | n.c. | n.c. |
| 4 | N/O contact | N/O contact |

## Notes on installation:

- The medium must not contain solid particles! We recommend using contamination strainer.
- External magnetic fields can affect the switching contact. Ensure sufficient distance from magnetic fields (e.g. from electric motors)
