

**Position Transducer
with return spring
potentiometric
up to 100 mm**

Series TR / TRS

Position transducers employing conductive plastic tracks provide direct, accurate measurement of travel in display or control systems and for continuous contour gauging.

The push rod is supported on both ends by metal glide bearings, allowing high lateral forces on the tip of the rod. The elastomer-damped wiper provides reliable contact when experiencing shock or vibration.

The design of the rear end stop nut on the push rod simplifies the mechanical connection of actuators like pneumatic cylinders and solenoids.

Special features

- long life up to 100 million movements, depending on application
- outstanding linearity - up to $\pm 0.075\%$
- Repeatability to $\pm 0.002\text{ mm}$
- actuating shaft with double-sided support
- special ball-coupling eliminates sideways forces
- high operational speeds - up to 10 m/s
- insensitive to shock and vibration
- TR-series with cable or TRS-series with connector versions
