## Digital Display Unit HDA 5500

## Description:

The digital display units in the series HDA 5500 are microprocessor controlled display and monitoring units designed for control panel mounting. Different versions are available with a maximum of 3 analogue inputs, an analogue output ( $4 . .20 \mathrm{~mA}$ or $0 . .10 \mathrm{~V}$ ) and up to 4 relay outputs.
The analogue input signals are displayed according to the settings selected by the user. Each of the relay outputs can be allocated to each of the sensor inputs (1 to 3) or to the differential between input 1 and 2 . A PT 100 temperature probe can be connected directly to the unit. There is also an option for frequency measurement using the HDS 1000 (HYDAC rpm probe), for example to measure the speed of rotating components.
Depending on the model, it is also possible to connect SMART sensors (condition monitoring sensors).
SMART sensors are a generation of sensors from HYDAC, which can transmit several different measured values.

## Special features:

- Digital display of analogue signals
- Clear 4-digit 7-segment LED display
- Up to 3 analogue inputs
(4 .. $20 \mathrm{~mA}, 0$.. 10 V or 0 .. 5 V )
- Accuracy $\leq \pm 0.5 \%$
- Differential measurement possible
- Analogue output
(4 .. 20 mA or 0 .. 10 V )
- Up to 4 relay switching outputs
- RS 232 interface
- Voltage supply

12 .. 32 V DC or
85 .. 265 V AC $50 / 60$ Hz

- Option for PT100 sensor input or frequency input

## Output models:

## Connection terminals:

Supply voltage:
plug-in terminal block 2 pole, RM 5.08
(cross section max. $2.5 \mathrm{~mm}^{2}$ )
Inputs / outputs:
plug-in terminal block 11 pole, RM 3.5
(cross section max. $1.5 \mathrm{~mm}^{2}$ )

## Relay:

plug-in terminal block 5 pole, RM 5.08
(cross section max. $2.5 \mathrm{~mm}^{2}$ )

## Model code:

## Inputs

HDA $5500-X-X-\underline{X X}-\underline{00 X}$

0 = one analogue input
1 = three analogue inputs
2 = one analogue input + frequency input / counter function
3 = one analogue input + PT 100 input

## Outputs

0 = 1 analogue output
1 = 1 analogue output +2 relay outputs
$2=1$ analogue output +4 relay outputs
Supply voltage
