Specification

The CV-10 was specifically designed to simplify your on-site calibration of accelerometers, proximity probes, velocity sensors and many more.

An extensive, portable and lightweight calibration system, traceable to NIST and PTB, delivered in a rugged case - and available at low investment costs. Only 9 kg, up to 10 hours battery driven operation

and powerful vibration exciters are just a few of numerous reasons why the CV-10 is the right choice for many industries like automotive, aviation, construction, condition monitoring or research and development. Accessories like the accessory set for proximity sensors or an extension module for PR sensors complement the CV-10 useful.
